

Near-Patient COVID-19 Antibody Testing

Reassure and protect your
workplace

Why use antibody testing?

- COVID-19 is a serious infection
- Up to 50% of infections can be entirely asymptomatic but still infectious
- Up to 80% infections contracted from asymptomatic carriers
- Important to test

Why use antibody testing?

- Triple antibody test can detect both acute and historic infection
- Easy to administer on site
- Results in 15 mins
- Creates a safer work place
- Reassures staff

How effective is it?

- CE marked
- Independently validated to be >98% accurate
- Can be used with clinical protocols to better inform isolation
- Safer than not having any test data

What are the limitations of swab testing

- Prone to tester variation
- Up to 30% false negative rate
- Difficult to access
- Only for symptomatic cases
- Expensive
- Delay to getting results

How can it be delivered?

- Test on-site
- Simple finger prick
- Results given in 20 minutes
- Supervised by a professional healthcare team
- Full protocols, tailored to you
- On-call clinical support

What are the benefits?

- Staff reassurance
- Improves compliance with social distancing and taking COVID precautions seriously
- Identify asymptomatic carriers
- Confirm previous COVID infection
- Create a safer work place
